1. Lead & Contact Management

The Contacts module is the core of Privio360. Every lead or customer is stored as a Contact with rich metadata, scoring, feedback tracking, and full communication history.

Key Fields

Name / Phone / Email	Primary identifiers. Phone is required for WhatsApp integration.
Company & Position	B2B context for deal attribution and filtering.
Source	Meta Ads, Google, Webform, Offline, Channel Partner, Missed Call, etc.
Lead Score (0-100)	Auto-calculated or manually set. Drives priority surfacing.
Feedback	Prospect, Interested, Callback, Pending, Not Interested, Converted, Lost, Invalid, Other.
Assigned To	Team member responsible for this lead.
Remarks / Notes	Free-text field for call notes, property preferences.
Budget & Location	Numeric budget and city/area for matching.
Tags	Multi-label tagging for filtering and segmentation.
Custom Fields	Flexible key-value store for industry-specific data.

Actions Available

Add Lead	Create a new contact via the '+' button.
Edit Lead	Click any row to open the detail drawer. Edit inline and save.
Delete Lead	Hover any row, click the trash icon at the end of the action bar.
Call / WhatsApp / Email	Quick-action buttons on each row -- one tap to initiate.
Pin as Priority	Click the pin icon to mark a lead as priority. Appears in Priority Leads dashboard.
Bulk Import	Upload CSV or sync from Google Sheets for bulk import.
Search & Filter	Full-text search + filter by source, feedback, assignee, tags, date range.

2. Deal Pipeline

Track every sales opportunity from initial discovery to closed deal. Deals link to Contacts and move through configurable pipeline stages.

Deal Title	Short descriptive name of the opportunity.
Deal Value	Monetary value in your local currency (INR by default).
Contact Link	Linked contact record -- name and phone are auto-populated.
Pipeline Stage	Current stage in the funnel (configured per industry in Settings).
Probability %	Likelihood of closing -- used in revenue forecasting.
Expected Close Date	Target date. Overdue deals are highlighted.
Priority	Low / Medium / High -- affects sorting and visual prominence.
Assignee	Team member owning the deal.
Tags	Labels for filtering (e.g., 'Q3', 'Enterprise', 'Referral').
Activities	Linked calls, emails, meetings, and notes on this deal's timeline.

Pipeline Views

Kanban Board	Drag-and-drop cards between stages. Visual overview of the entire funnel.
List View	Tabular view for sorting and bulk actions.
Forecast View	Weighted revenue by stage and close date.

3. Invoice & Billing

Generate professional GST-compliant invoices with your company branding, logo, and stamp. Invoices are downloadable as PDF using html2canvas + jsPDF rendering.

Creating an Invoice

Invoice Number	Auto-generated sequential number (INV-1001...). Editable before saving.
Client Info	Client name, address, phone, email -- pulled from contact or entered manually.
Line Items	Product/service description, HSN code, quantity, unit price, GST rate.
GST Calculation	CGST + SGST (intra-state) or IGST (inter-state) auto-calculated per line item.
Discount	Percentage or flat discount applied at the invoice level.
Notes / Terms	Free-text for payment terms, bank details, or custom notes.
Due Date	Payment due date printed on the invoice.

Company Branding Settings

Company Name	Your business name printed at the top of every invoice.
Company Address	Full address with city and PIN. Persisted to server.
Company Phone	Contact phone number shown on invoice header.
Company Email	Business email on invoice header.
Logo Upload	Upload PNG/JPG logo. Displayed in invoice header. Stored as base64.
Stamp Upload	Upload company seal/stamp image. Appears at invoice bottom. BG auto-removable.
Template	Choose from Modern, Classic, or Minimal layout styles.
Font	Select invoice font: Inter, Poppins, Roboto, or Lora.

All branding is saved to both localStorage (instant load) and the server database (persists across devices). Stamp and logo always appear correctly in PDF preview.

4. WhatsApp Automation

Send templated WhatsApp messages to leads automatically based on triggers and delays. Supports variable substitution for personalized outreach at scale.

Built-in Templates

Template	Trigger	Delay	Purpose
New Lead Welcome	new_lead	Immediately	Greet the lead on first contact
Follow-Up Day 1	follow_up	1 day	Check availability for a call
Follow-Up Day 3	follow_up	3 days	Schedule a 15-min conversation
Warm Lead Nudge	warm_lead	2 days	Re-engage interested leads
Proposal Sent	proposal_sent	Immediately	Notify when proposal is emailed
Site Visit Confirm	custom	On event	Confirm visit/demo with address
Last Follow-Up	follow_up	7 days	Final outreach before archiving

Template Variables

{{name}}	Lead's full name
{{companyName}}	Your company name from branding settings
{{senderName}}	Logged-in team member's name
{{requirement}}	Lead's noted requirement or property type
{{date}} / {{time}}	Scheduled visit or meeting date and time
{{address}}	Visit/office location address

5. Email Automation

Send structured email sequences automatically with trigger-based timing. All templates support the same variable substitution as WhatsApp.

Welcome Email	Sent immediately on new lead. Sets expectations and promises callback within 24h.
Follow-Up Day 2	Second touchpoint -- asks for a 15-min call slot.
Nurture Value Share	Day 5 -- shares case studies and value propositions. Fully customizable.
Proposal Email	Triggered when proposal status is set. Includes bullet summary and review request.
Closing Final Offer	Day 10 -- last push with special offer or incentive. Disabled by default.
Re-engagement	Day 14 -- soft check-in for cold/silent leads. Disabled by default.

Each template can be toggled on/off independently. Subject and body support full HTML formatting.

6. Meetings & Calendar

Book, manage, and join meetings directly from the CRM. Supports physical and video meetings with Google Meet integration.

Book Meeting	Create a meeting with title, linked contact, date/time, duration, and location type.
Physical Meeting	In-person meeting with optional venue address.
Video Meeting	Creates a 'Join Meet' button. Opens Google Meet link or meet.new for instant meetings.
Meeting Status	Upcoming / In Progress / Completed / Cancelled -- auto-updates based on time.
Calendar View	Monthly/weekly calendar grid with meeting dots and quick-view popups.
Reminders	Upcoming meetings highlighted in the dashboard widget.
Meeting Notes	Post-meeting notes attached to the meeting record.

7. Priority Leads Dashboard

A focused workspace for your most important leads. Access pinned, high-score, and hot leads from a single view.

Pinned Leads	Leads manually pinned from the Contacts table. Pin status persists in localStorage.
High Score (>=70)	All contacts with a lead score of 70 or above -- your statistically warmest prospects.
Hot Leads	Contacts with feedback: Interested, Callback, or Prospect -- actively engaged leads.
Stat Tiles	Quick counts: total pinned, high-score, and hot leads at a glance.
Lead Card	Compact card with name, company, score badge, feedback tag, and quick-action buttons.
Quick Actions	Call, WhatsApp, and Email buttons directly on each lead card.
Search	Real-time search filters within the current view tab.

To pin a lead: go to Contacts, hover any row, click the purple pin icon on the right side. Pinned leads appear immediately in the Priority Leads dashboard.

8. AI Lead Insights

AI-powered analysis of every lead's conversion potential. Scores, trends, urgency ratings, and next-action recommendations surfaced automatically.

Conversion Probability	0-100% score from feedback status and lead score. E.g., 'Interested' base = 75%.
Urgency Level	High (Interested/Callback), Medium (Prospect/Pending), Low (all others).
Trend	Up / Down / Stable -- based on recent activity and score movement.
Recommendation	Auto-generated action text: 'Schedule a demo', 'Follow up within 24h', etc.
Next Action	Specific tactical suggestion highlighted in an amber callout box.
Tags	AI-inferred labels: Hot Lead, High Value, Needs Nurturing, At Risk, Quick Win.
Filter by Urgency	Tabs to view High / Medium / Low urgency leads independently.
Sort	Sort by conversion probability, lead score, or urgency level.

Conversion probability formula: $\text{baseRate}[\text{feedback}] + ((\text{score} - 50) \times 0.3)$, clamped to 5-95%.

9. SMS Campaigns

Build and schedule SMS campaigns targeting specific lead segments. Track delivery rates and campaign performance from a single dashboard.

Campaign Name	Internal label for the campaign.
Message	SMS body up to 160 characters. Character counter shows remaining capacity.
Target Audience	Filter by feedback status -- send only to Interested, Callback, Prospect, etc.
Schedule	Immediate send or scheduled datetime for future delivery.
Status	Draft / Scheduled / Sent / Failed -- color-coded badges.
Sent Count	Number of SMS messages sent in this campaign.
Delivery Rate	Percentage delivered, shown as a progress bar (Delivered / Sent).
Stats Overview	Header tiles: total campaigns, total sent, total messages, overall delivery %.

Note: UI-ready. Backend API integration with MSG91 required to activate real sending. Configure credentials in Settings -> Integrations.

10. IVR Flow Builder

Design visual interactive voice response (IVR) call trees for your business phone line. Route incoming calls to the right team member or action automatically.

Node Types

Greeting	Plays a welcome message when the call is answered.
Menu	Presents numbered options to the caller (Press 1 for Sales, Press 2 for Support...).
Transfer	Forwards the call to a specific phone number or agent group.
Voicemail	Records caller's message and emails it to the configured address.
Send SMS	Automatically sends a text message to the caller mid-call.
Office Hours	Branches based on whether call is within configured business hours.
Hang Up	Ends the call gracefully with a final message.

How to Build a Flow

Step 1: Click the '+' button in the IVR Flows panel to create a new flow.

Step 2: Name the flow and enter your business phone number.

Step 3: Click 'Add Node' to insert nodes -- start with a Greeting.

Step 4: Continue adding Menu, Transfer, and Voicemail nodes to complete the tree.

Step 5: Click 'Save & Activate' to mark the flow as active.

Step 6: Connect your telephony provider (MSG91 / Exotel / Twilio) in Settings -> Integrations.

11. Click-to-WhatsApp Ads Manager

Set up and monitor Meta Click-to-WhatsApp (CTWA) ad campaigns directly from Privio360. Leads generated from ads flow directly into your CRM as new contacts.

Setup (4 Steps)

Step 1 -- Meta Business	Connect your Meta Business Manager account.
Step 2 -- WhatsApp Business	Link your WhatsApp Business API number.
Step 3 -- Ad Account	Select the Ad Account to run campaigns from.
Step 4 -- Webhook	Configure the webhook URL so leads auto-populate in Privio360.

Campaigns Tab

Campaign Name	Display name of the ad campaign.
Status	Active / Paused / Ended with color badge.
Impressions	Total number of times the ad was shown.
Clicks	Number of clicks on the WhatsApp button.
Conversations	WhatsApp conversations started from the ad.
Spend / Budget	Amount spent vs. campaign budget with a progress bar.

12. Industry Templates & Settings

Privio360 adapts to your industry out of the box. On first setup, choose your industry to get pre-configured pipeline stages, field labels, and templates tailored to your business.

Supported Industries (16)

- SaaS / Technology
 - E-Commerce / Retail
 - Real Estate
 - Healthcare
 - Education
 - Finance & Insurance
 - Manufacturing
 - Consulting / Agency
- Car Showroom / Auto
 - Restaurant / F&B;
 - Travel & Tourism
 - Logistics & Delivery
 - Legal / Law Firm
 - Events & Wedding
 - Fitness & Wellness
 - Jewellery / Luxury

Business Types

B2B	Business-to-business. Pipeline stages focus on proposals, contracts, and enterprise sales.
B2C	Business-to-consumer. Optimized for volume, fast follow-up, and conversion tracking.
B2B2C	Hybrid model. Balances channel partner management with end-consumer nurturing.
D2C	Direct-to-consumer. Focus on online lead capture, WhatsApp engagement, and repeat purchase.

13. Feature Status Summary

Current build status of all Privio360 CRM modules as of July 2026.

Feature	Status	Details
Lead & Contact Management	Live	Full CRUD, scoring, feedback, pin, import
Deal Pipeline (Kanban)	Live	Drag-drop stages, deal CRUD, activities
Invoice & GST Billing	Live	PDF export, branding, stamp, logo, line items
WhatsApp Automation	Live	7 templates, variable substitution, triggers
Email Automation	Live	6 templates, trigger-based sequences
Meetings & Calendar	Live	Book, manage, Google Meet link integration
Priority Leads Dashboard	Live	Pinned / High Score / Hot Lead views
AI Lead Insights	Live	Conversion probability, urgency, next action
SMS Campaigns	UI Ready	UI complete; MSG91 backend integration pending
IVR Flow Builder	UI Ready	UI complete; telephony provider integration pending
Click-to-WhatsApp Ads	UI Ready	UI complete; Meta Ads API integration pending
Google Meet (real links)	Partial	Opens meet.new; Google Calendar API not wired
Mobile App / PWA	Planned	Responsive web only; no native app yet
Hostinger Cron (follow-ups)	Pending	Crontab command ready; must be set on VPS

Deployment Notes

Server	Hostinger VPS -- PM2 process manager, Node.js runtime
Database	MySQL via Drizzle ORM + rawPool (mysql2) for full column access
Build Command	NODE_OPTIONS='--max-old-space-size=4096' npm run build
Process Manager	pm2 restart privio360-crm
Deploy Webhook	POST /api/webhook/deploy with DEPLOY_WEBHOOK_SECRET header
App URL	https://app.privio360crm.com
